

Remote Geocoding Plug-in for MapInfo Professional®

- Free unlimited interactive geocoding
- Batch geocoding
- Use with local geocoders too...

Web Mapping Contest is over

The winner in Government category – Map.Hamilton.ca, submitted by [Heather Howe](#), City of Hamilton

Brief Description: This site provides interactive mapping on a General Hamilton Atlas including specific subjects such as 2003 Tax Impacts, Capital Projects, the National and World Cycling Championships and the Bell Canadian Open. A user can search for a specific location using a municipal address, a point of interest, or simply by street intersection. Integrated aerial photography is also available as an enhanced background to other data sets. The site was created using Intergraph's GeoMedia WebMap Publisher.

The winner in Business category – [SugarLoaf Live Conditions Map](#), submitted by [Patrick Cunningham](#), Blue Marble Geographics

Brief Description: Sugarloaf Mountain uses www.BeyondGeo.com to update their customers and the public of the most recent snow conditions of the mountain. This map during season will show which trails are open and closed and give the skier the ability to view the trails from many different levels.

The winner in Miscellaneous category – [Lunar Real Estate Finder](#), submitted by [Chris Pendleton](#), Microsoft

Brief Description: Are you wondering where the Moon land lot you purchased via spam is located? Type in an Earth address and see where it would be plotted if it were on the moon. This is a fun web application to "compliment" those companies selling property on the moon. If they ever find water up there I could change this from the miscellaneous category to the government or business category!

The maps were moved to [Web Map Gallery](#).
